

# Point of Care Screening Card Completion Guide

The last page of the newborn screening card is used for CCHD documentation and confirmation that the family has a biliary atresia Infant Stool Colour Card. All babies should have this yellow form submitted, completed with either a CCHD screen result or a reason the screen was not completed.

Ensure all infant and submitter information is complete. Use of patient labels and stamps is encouraged.

Please indicate confirmation that the family has a **biliary atresia Infant Stool Colour Card (ISCC)**. (If they don't have one, please provide one with instruction on how to use it.)

### IF CCHD SCREEN IS NOT DONE:

Select all applicable reasons why the screen was not done. There is space to provide more information if a cardiac issue is present.

Use the '**Repeat DBS, No CCHD screen**' option for repeat samples. Do not submit blank cards.

**IF CCHD SCREEN IS DONE:**  
Document CCHD screen results including date and time of screen, saturation values and evaluation.
